

# Testing Infrastructure in Rosetta

Sergey Lyskov

Jeff Gray lab JHU  
2009

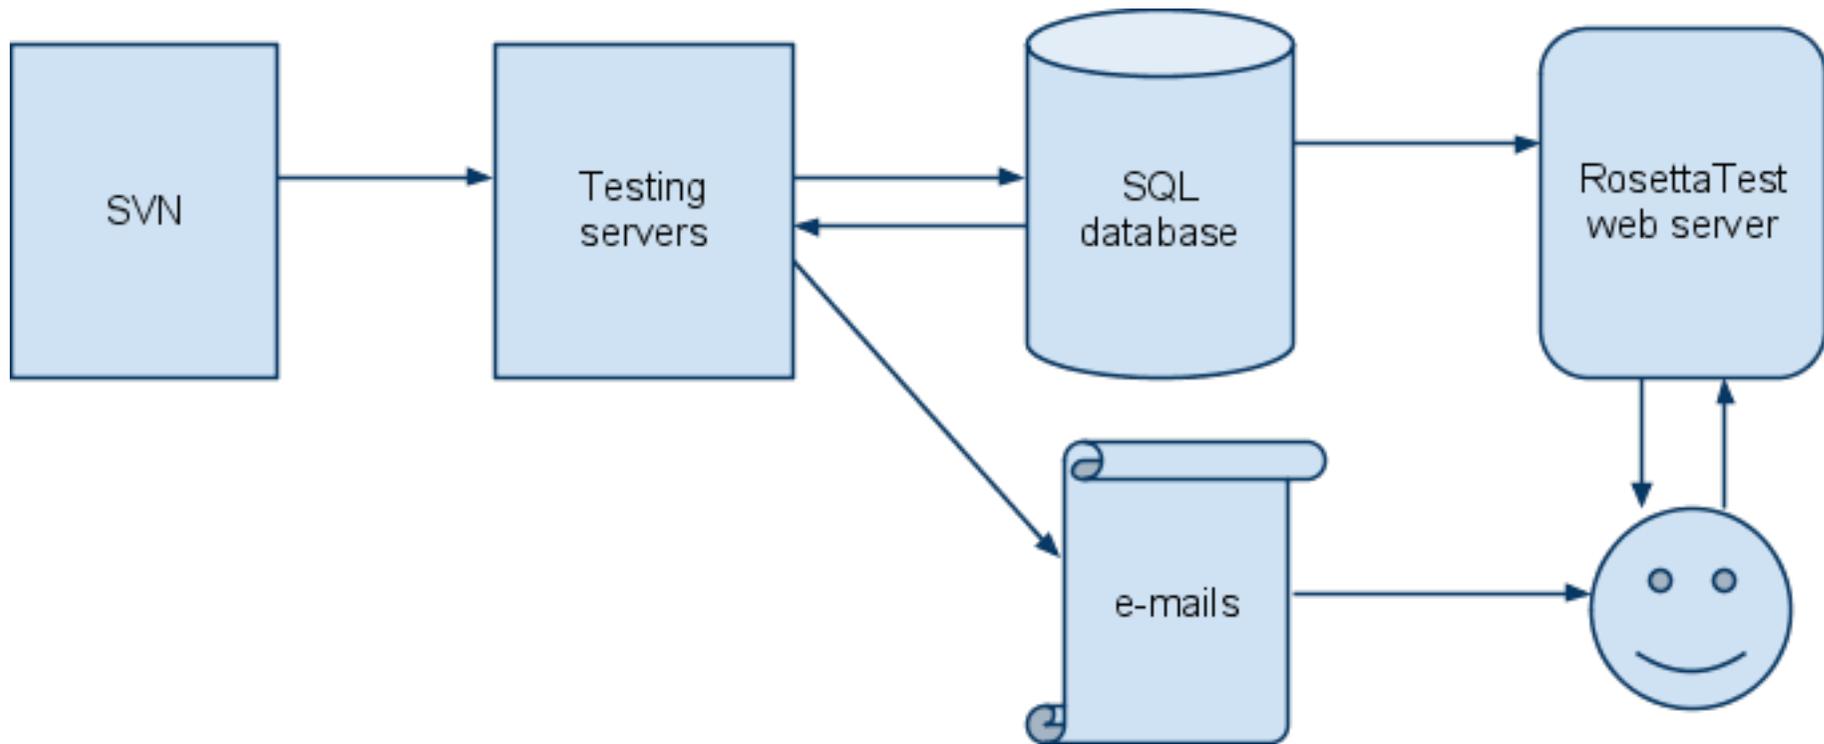

<http://rosettatests.graylab.jhu.edu>

## Old data flow

- A lot of email that no one wants to read!
- Hard to search for old results.
- Hard to compare old with new results.
- We can not send all data (logs/graphs/files) that user may need...
- Testing servers can not exchange data with each other, making tasks like generating summaries/tests report hard to implement.
- Realistically results can only consist of text logs...

## New data flow

- We don't have to send so many large emails now, user could retrieve information on a need-to-know basis!
- All test results are searchable now!
- We can store full results of tests in DB (including all files) and provide it to user on request.
- Results could consist of logs/graphs/picture/pdf... anything!
- Side-by-side comparison of results of two revisions.
- Testing servers can retrieve previous results from DB and use it to compare data and generate summaries.

# Available test types

- Unit tests
- Integration (regression) tests
- Performance benchmark tests
- Scientific daily tests (single CPU)
- Scientific weekly tests (single CPU)
- Scientific cluster tests (run on condor guided 80CPU cluster)

**524 Unit tests, 41 Integration tests, 12 Scientific tests, 9 Performance tests**

# List of currently implemented scientific tests:

1. abinitio
2. dna\_interface\_design **[provide pass/fail flag]**
3. docking
4. ligand\_docking
5. loop
6. membrane
7. monomer\_ddg
8. multi\_residue\_ligand\_docking
9. relax
10. rna\_denovo **[provide pass/fail flag]**
11. rna\_design **[provide pass/fail flag]**
12. sequence\_recovery

Test '**ScientificDaily.rna\_design**' for SVN revision [\[31755\]](#)

Trac link: [31755](#)

Test id: 9039 <-- send this for tech support

Test name: ScientificDaily.rna\_design

Log file: [\[log\]](#)

YAML file: [\[yaml\]](#)

Test files: [\[files\]](#)

Started: 2009-07-29 19:47

Finished: 2009-07-29 22:24

You can view results of two revisions side by side by selecting second revisior

*Please note that some revision may not contain YAML information or contain*

Variable	31755	Plot
RNA_SeqRecoveryNoBasePairs	0.38	<a href="#">P</a>
RNA_SeqRecoveryNonWC_BasePairs	0.74	<a href="#">P</a>
RNA_SeqRecoveryOverall	0.52	<a href="#">P</a>
RNA_SeqRecoveryWC_BasePairs	0.45	<a href="#">P</a>
<b>_isTestPassed</b>	<b>True</b>	<a href="#">P</a>

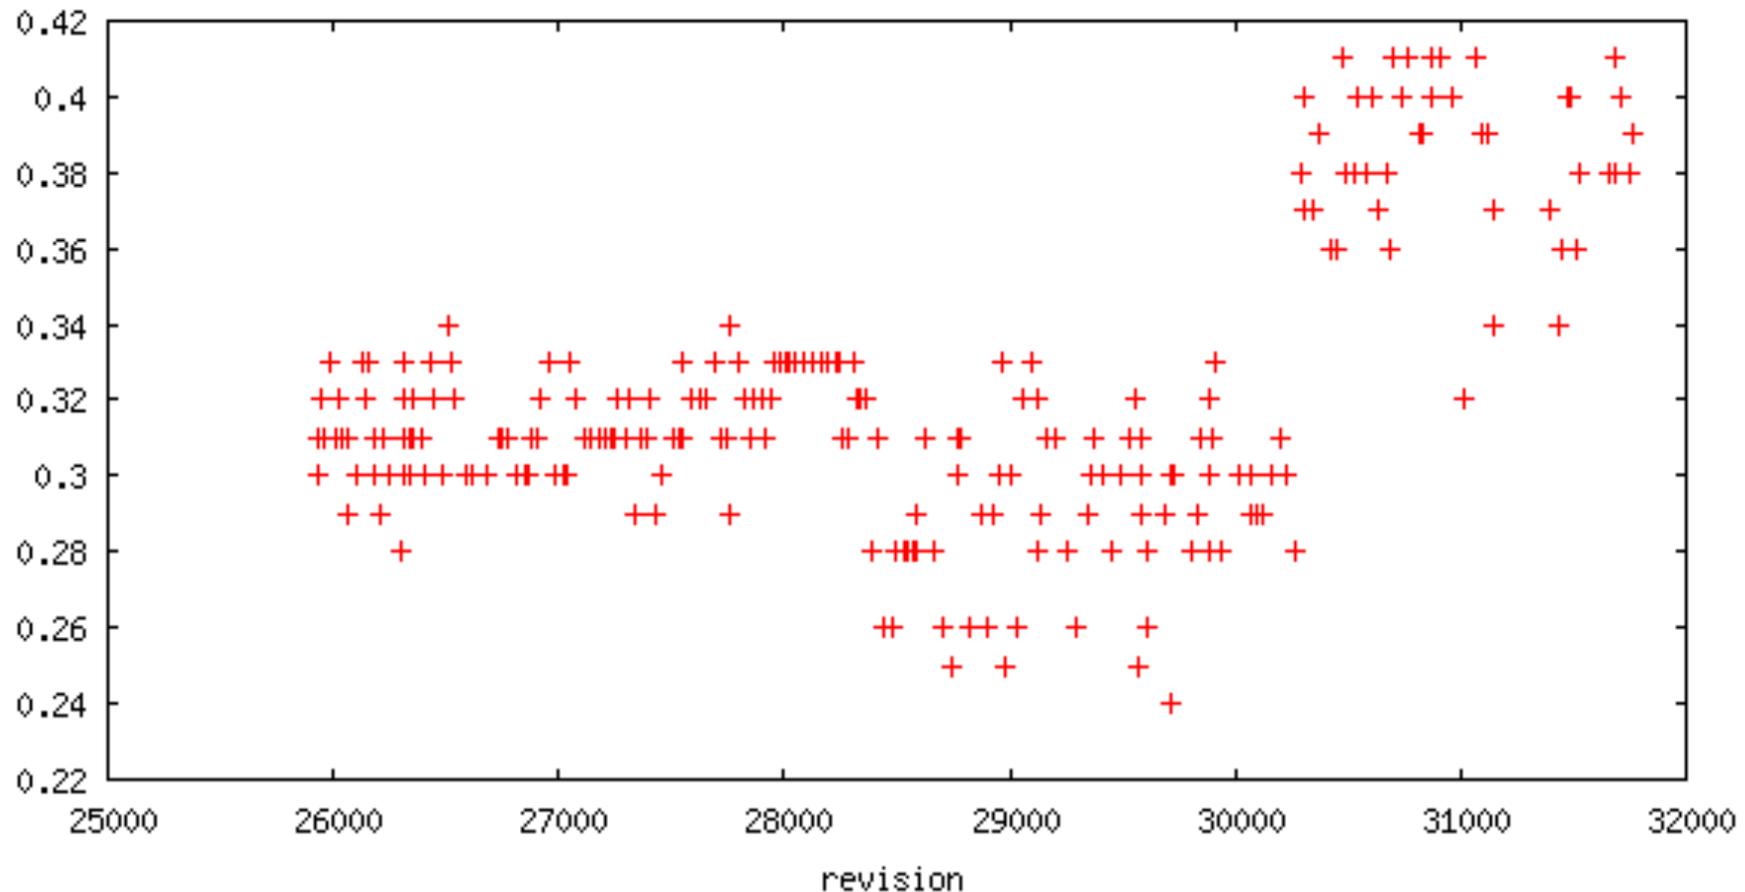

Test Log [\[Original unformatted log\]](#) -----

```
no base pairs, seq. recovery: 0.38 [should be more than 0.30]
Watson/Crick bp, seq. recovery: 0.45 [should be more than 0.35]
non-Watson/Crick bp, seq. recovery: 0.74 [should be more than 0.70]
all RNA, seq. recovery: 0.52 [should be more than 0.45]
```

Plotting value **RNA\_SeqRecoveryNoBasePairs** from test **ScientificDaily.rna\_design**

# Available emails

- **[mini-logs]** 'Nightly tests results': Unit test + Integration tests + daily scientific tests results.
- **[mini-logs]** 'Daily change log': svn change log for the last 24h + build tests results.
- **[mini-logs]** 'Performance benchmark': Latest result of performance benchmark tests + comparison with previous results.
- **[rosetta++logs]** 'DailySummary': Provide daily overview and state of Mini branch which include build status, tests change/broken status, latest dates of successful run of scientific tests.
- **[personal]** 'Observer notification emails': Notify users if certain unit/integration test fails. (Each developer can customize this by providing list of tests that he want to 'observe')
- **[personal/mini-logs]** 'Commit confirmation email'/'Build/tests broken notification email': provide detailed information for each svn commit to main Mini trunk. This include: build status for each of 5 standard builds, results of unit tests, results of integration tests, C++ build warnings.

# Testing Servers

- Revision-by-revision testing daemon. 8 CPU high-end Linux box. Run build/unit/integration for each revision.
- Nightly test daemon. Provide nightly SVN change log, daily scientific tests, performance benchmark tests.
- Weekly single CPU scientific test daemon.
- Cluster scientific test daemon. 104 CPU RosettaCommons dedicated cluster.

# Fun facts

Since October 2008:

- ~ 9,000 tests suites ran
- ~ 900,000 individual tests executed.
- ~ 9,000 emails was sent to users (~250Mb).

Plotting value **core\_scoring\_Score** from test **Performance**

# RosettaTests

[\[Revisions\]](#) [\[Tests\]](#) [\[Search\]](#) [\[CurrentStatus\]](#) [\[Analyze\]](#) [\[Statistics\]](#)

This is predefined plots for most commonly used variables. You can create your own plot by selecting: tests, select test that contain variable you want to plot, and clicking on plot link ('P'). Note: Only variable that present in YAML output can be plotted (most scientific tests contain all important results in YAML form).

# Next priorities

1. Assist users in adding pass/fail criteria to scientific benchmarks.
2. Add better performance (speed) benchmarks.
3. Upgrade to gcc 4.1!
4. Simplify debugging of the tests.
  - Create a way to debug cluster scientific tests on single CPU machines.
  - Add option to download testing server binaries.
5. Add more features to website to improve usability.

**Suggestions and feedback welcome!**
